## SSEAM25

The **SSEAM25**, the ultimate roofing solution designed to deliver a modern and clean aesthetic. With its carefully selected materials, this profile offers flexibility and versatility for various roof designs while maintaining its original look.

After Seaming

Minimum Roof Pitch: Above 1 degree

**Disclaimer:** The SSEAM25 profile is designed to accommodate installation on roofs with a minimum pitch of 1 degree. However, due to the potential for deflection within the structural purlin design, achieving an exact 1-degree pitch may not always be practical. To mitigate issues related to low water flow velocity, it is recommended to design the roof with a pitch of 2 degrees. This adjustment ensures optimal performance and effective water flow.
